

Jacqueline Vo, PhD, RN, MPH

Assistant Clinical Investigator
Radiation Epidemiology Branch
DCEG Shady Grove

Words to live by...

Success is liking yourself, liking what you do, and liking how you do it.
-Maya Angelou

Scientific interests

I study breast cancer survivorship and how cancer treatment can increase the risk of secondary malignancies and cardiovascular disease. I also study how cancer burden can differ for minoritized populations, with a special interest in the disaggregation of Asian American from Native Hawaiian and other Pacific Islander populations, which are two distinct racial groups.

What is your favorite thing about working at NCI?

The people I work with and the impact we make on cancer survivors. My colleagues, my mentees, and I work together to help cancer survivors live longer, healthier lives.

In my spare time, I enjoy...

I like to bake and try new restaurants with my husband and two daughters, and we like to go on long walks with our dog.

A fun fact about myself is...

I enjoy cooking and baking Vietnamese dishes and sharing them with my friends and neighbors.
