

NCI's National Clinical Trials Network (NCTN) Brief Overview and Resources

Andrea Denicoff, MS, RN

Grace Mishkin, MPH

NCTN Clinical Trials Operations

Cancer Therapy Evaluation Program, Division of Cancer Treatment & Diagnosis

Partnerships to Advance Cancer Health Equity
(PACHE) Program Meeting
July 23, 2018

Objectives

- Provide a brief overview of NCI's National Clinical Trials Network (NCTN)
- Briefly describe NCTN Navigator, a clinical trials biospecimen resource

Brief NCTN Overview

Andrea Denicoff, MS, RN

NCI National Clinical Trials Network (NCTN) Structure

Selected Major NCTN Trials

• Precision Medicine Trials: Screening & Assignment to Multiple Interventions Requiring a National Patient Catchment Area

ADULT MATCH & PEDIATRIC MATCH (Target Therapies Across Histologies)

DART (Dual Immunotherapy in Rare Cancers)

LUNG MAP, ALCHEMIST (Target Therapies in Advanced & Early Stage Lung Ca)

• Multimodality & Non-Drug Trials

Role of Weight Loss in Treatment of Early Breast Ca

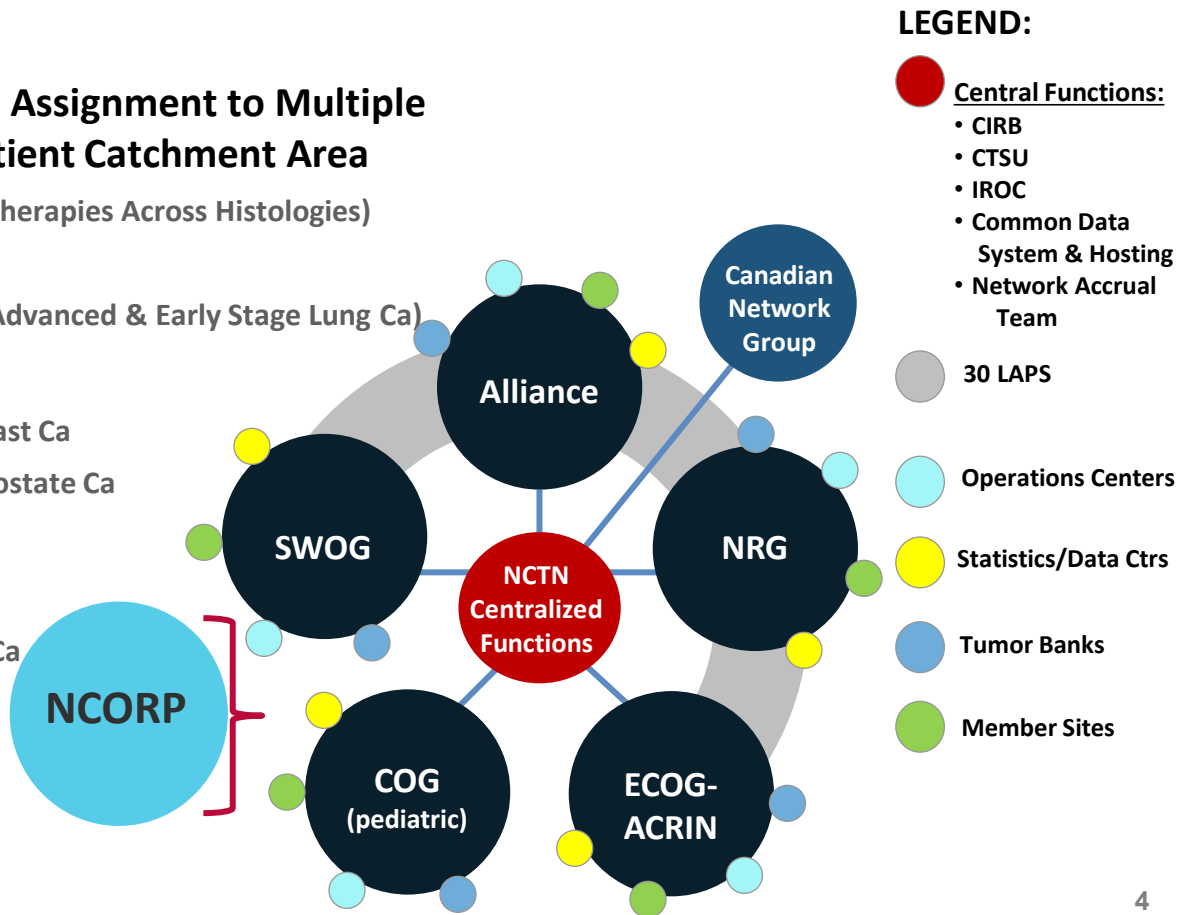

Dose-Escalated RT +/- ADT in Intermediate Prostate Ca

• Combination Therapy Trials

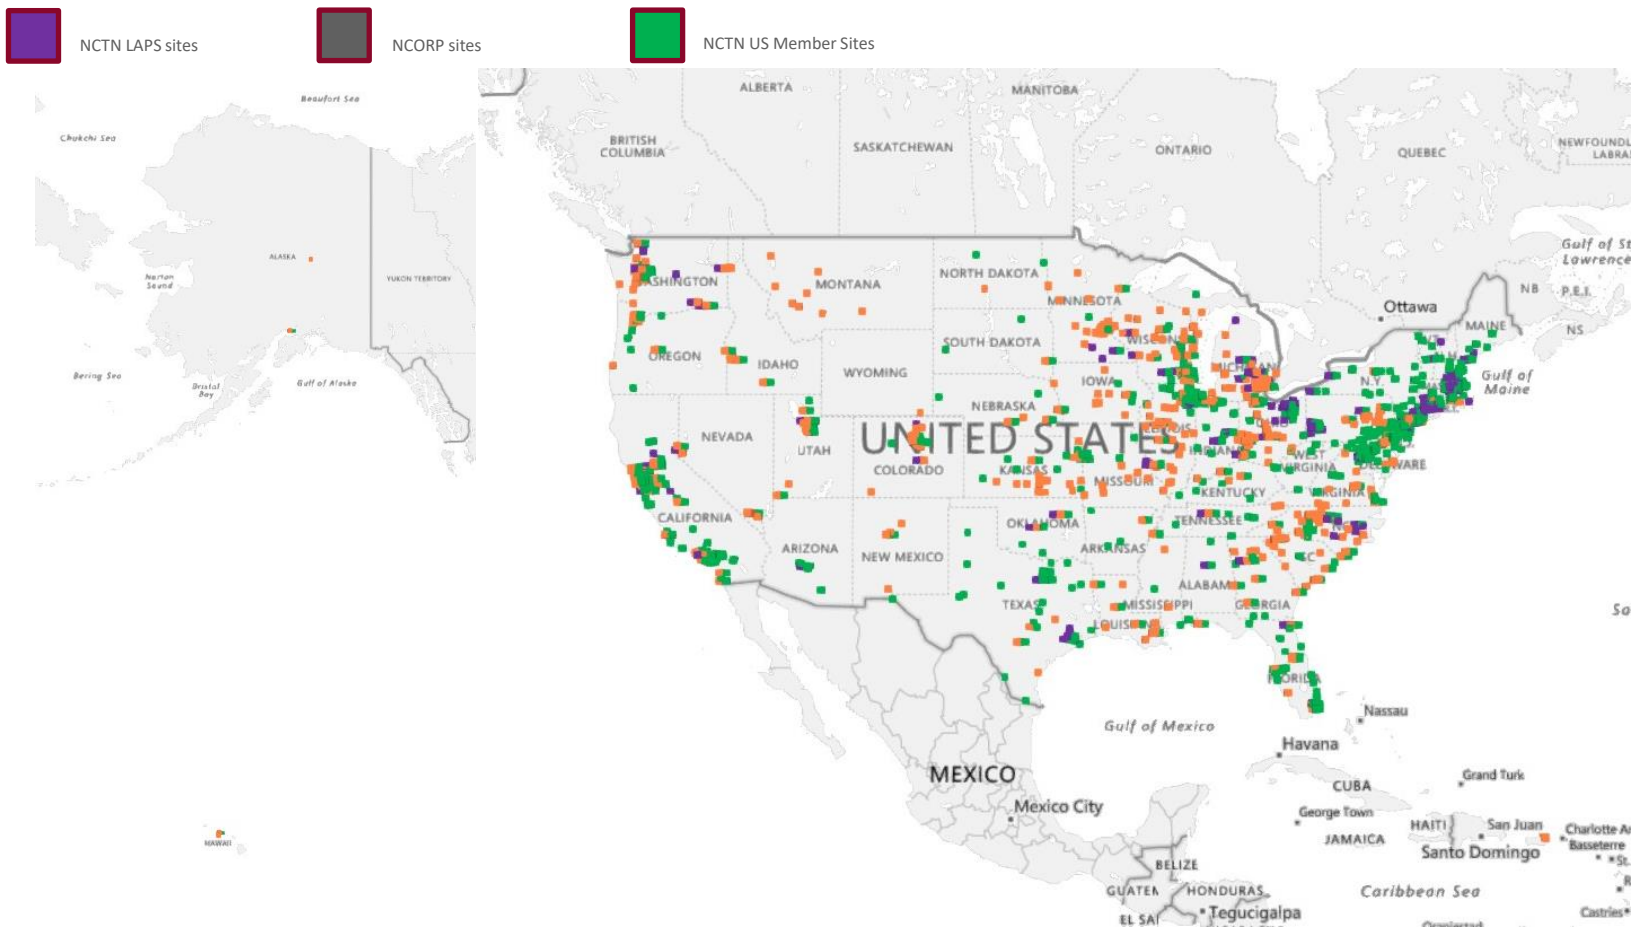

Cediranib & Olaparib in Recurrent Ovarian Ca

Chemo + Immunotx in Resected Stage III Colon Ca and Deficient DNA Mismatch Repair

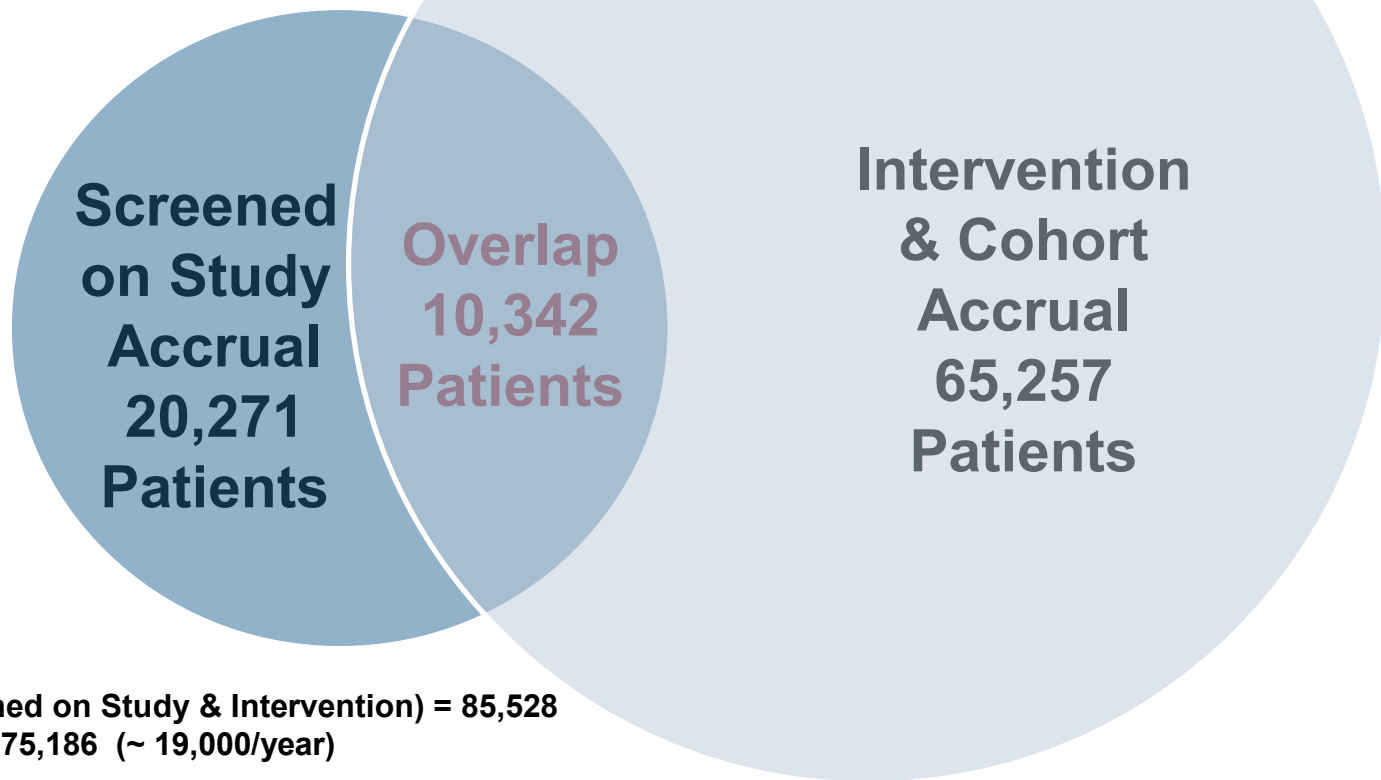

Brentuximab Vedotin or Crizotinib with Chemotx for Newly Diagnosed ALCL

Sites with at Least 1 Enrollment to NCTN studies - Mar 1, 2014 to Feb 28, 2018 (First 4 Years of the NCTN Program)

NCTN Program Accrual 3/1/14 to 2/28/2018

Total Enrollments (Screened on Study & Intervention) = 85,528
Total # Unique Patients = 75,186 (~ 19,000/year)

NCTN Clinical Trial Resources

Grace Mishkin, MPH

NCTN Navigator

NCTN Navigator | A Clinical Trials Specimen Resource

[✉ Contact FDS](#) [📍 FAQ](#)

NCI's **National Clinical Trials Network (NCTN)** [↗](#) Navigator is a resource for investigators who have typically conducted exploratory correlative analysis and are now seeking specimens to validate their hypotheses. Click the "Explore Specimens" button to the right to explore the inventory.

CTEP-IAM Log-In should only be used when you are ready to submit a LOI. If you have questions, please review the FAQs and if your question is not answered there, contact the **Front Door Service** [✉](#) for assistance.

Navigator Process Flow

The Navigator inventory is currently limited to select adult treatment trials that were conducted by NCI's NCTN clinical trials Groups, Phase 3 or large biospecimen collection protocols with clinical data, and completed, with the primary outcome reported. For additional information on the process workflow, refer to the **Steps for Researchers** [↗](#) document.

To Search Specimens Only

Current NCTN Navigator Inventory – July 2018

STEPS FOR RESEARCHERS

1

EXPLORE THE NAVIGATOR WEBSITE

Read about what Navigator offers, including the overall process, available specimens, expected timelines, and potential costs for approved proposals.

2

SEARCH FOR SPECIMENS USING GUEST ACCESS

Enter Navigator as a guest and search for specimens. Download a report for more details. Contact the Front Door Service if you have questions.

3

REVIEW THE SPECIMENS AND TRIALS

Review published data from the trials to learn more about the specimen collections, completed projects, and available clinical data.

4

CONSIDER YOUR SCIENTIFIC QUESTION

Are these specimens appropriate for your question? Is your question an appropriate use of this finite specimen resource and clinical data?

5

CREATE AN ACCOUNT

Create a CTEP-IAM account. Log in with your provisional account to move forward.

6

SUBMIT AN LOI

Fill out and submit an LOI with your project title, hypothesis, requested specimens and clinical data, and proposed assays.

7

REVIEW THE FEASIBILITY REPORT

The LOI will be reviewed for feasibility based on your requested specimens and data. If your LOI is feasible, you can submit a proposal.

8

SUBMIT A PROPOSAL

Fill out the scientific proposal form and upload it in Navigator. You will need letters of support from all collaborators.

9

FUNDING, IRB APPROVAL, & USE AGREEMENTS

If your proposal is approved, document your funding, IRB approval, and data and material use agreements before specimens and data can be released to you.

10

COMPLETE THE PROPOSED PROJECT

Use the specimens and data as outlined in your approved proposal. Publish your results and comply with data sharing requirements.

Math question *

10 + 6 =

Solve this simple math problem and enter the result. E.g. for 1+3, enter 4.

Request Research Data

NCI has created a centralized, controlled-access database, called the NCTN/NCORP Data Archive, for storing and sharing datasets generated from clinical trials of the [National Clinical Trials Network \(NCTN\)](#) to make these datasets available in a timely manner, on appropriate terms and conditions, to researchers who wish to analyze the data in secondary studies to enhance the public health benefit of the original work.

Contact:

For questions about the NCTN/NCORP Data Archive, please contact NCINCTNDataArchive@mail.nih.gov.

Internet Explorer users: This site is not currently optimized for IE, please consider using another browser.

[Search the NCTN/NCORP Data Archive](#)

Data requesters must sign a Data Use Agreement (DUA) before being able to download data for a given data request. A DUA is also required for initial account creation. When you request data, a DUA will automatically be generated that contains the details of your request. The DUA contains certain [key points](#) to which each data user must agree.

- [Sample Data Use Agreement template for Trials with No Collaborative Agreement \(PDF - 144KB\)](#)
- [Sample Data Use Agreement template for Trials with Collaborative Agreements \(PDF - 144KB\)](#)

Leading cancer research. Together.

a National Cancer Institute program

S1613: A Randomized Phase II Study of Trastuzumab and Pertuzumab (TP) Compared to Cetuximab and Irinotecan (CETIRI) in Advanced/Metastatic Colorectal Cancer (MCRC) with HER-2 Amplification

Primary Objectives:

- To evaluate the efficacy of trastuzumab and pertuzumab (TP) in HER-2 amplified metastatic colorectal cancer (mCRC) by comparing progression-free survival (PFS) on TP compared to control arm of cetuximab and irinotecan (CETIRI).

Estimated Enrollment: 130
